4. Data Sources & Methodology

1. Executive Summary

This report presents a comprehensive SEO audit of **flystar.co.in** for a **Local Service / Educational Organization (DGCA pilot training) + B2B aviation services** site, generated on July 30, 2026. Findings combine technical, content, schema, performance, visual, and search-readiness evidence as available.

55/100

SEO HEALTH SCORE

Critical Issues Found:

1. **Info:** Client-side-rendered SPA: per-page title, description, canonical, Open Graph and JSON-LD only exist after JS runs; raw HTML for every URL is the homepage's metadata.
2. **Info:** Soft 404s — unknown URLs return HTTP 200 with the SPA shell.
3. **Info:** Canonical tag present only on the homepage (1 of 42 pages); ~25 keyword-alias routes render duplicate components.
4. **Info:** Open Graph / Twitter Card tags exist only on the homepage.
5. **Info:** The same homepage JSON-LD graph (Organization + CPL breadcrumb + Course) is injected on every route; robots.txt lacks a Sitemap directive.

Quick Wins:

1. Add 'Sitemap: https://www.flystar.co.in/sitemap.xml' to robots.txt.
2. Return a real HTTP 404 for unknown routes on Vercel.
3. Bake default Open Graph + Twitter tags into index.html.
4. Add canonical via react-helmet-async to all pages (homepage pattern exists).
5. Add <lastmod> to sitemap and trim keyword-stuffed schema name fields.

2. Audit Categories

2.1 Technical SEO

Score: **45/100**

What Works

- HTTPS + HSTS enforced
- Production ships hashed bundled assets with modulepreload (no dev-source leak)
- robots.txt allows all crawlers; Brotli compression
- Clean readable URLs; valid 43-URL XML sitemap

Findings

Client-side rendering with no SSR/prerender fallback **Critical**

Raw HTML is a 203-byte shell + loader; is_spa=true. Google renders JS deferred; Bing, social and most AI crawlers do not.

Recommendation: Add SSG/SSR or prerender the 43 sitemap URLs at build time.

Soft 404 — 200 status on unknown routes **Critical**

GET /this-page-does-not-exist-xyz123 returns HTTP 200 with the SPA shell.

Recommendation: Serve a real 404 status for non-matching paths on Vercel.

Metadata fetched client-side from external Render.com API **High**

useMeta.ts fetches /api/meta from a Render free instance (cold-start risk) and sets document.title via DOM on every navigation.

Recommendation: Render meta server-side / at build; remove the runtime external dependency.

robots.txt missing Sitemap directive **High**

No Sitemap: line in robots.txt.

Recommendation: Add Sitemap: <https://www.flystar.co.in/sitemap.xml>.

Missing security headers **Medium**

Only HSTS present; no X-Content-Type-Options, frame protection, or Referrer-Policy.

Recommendation: Add headers in vercel.json.

Core Web Vitals not measurable live **Medium**

PageSpeed Insights API returned 429 (quota) during audit.

Recommendation: Re-run PSI/CrUX with an API key after render fixes.

2.2 Content Quality

Score: **65/100**

What Works

- Broad intent-matched topical coverage (CPL/ATPL/PPL, DGCA, country pages, services)
- E-E-A-T anchors: founded 2008, physical address, phone, external profiles
- One H1 per page across all 42 pages

Findings

Body content is JS-dependent **High**

Non-rendering crawlers and AI engines see almost no text.

Recommendation: Server-render/prerender content.

Limited visible E-E-A-T depth **Medium**

No surfaced instructor bios, DGCA approval numbers, or accreditation pages.

Recommendation: Add named-expert and accreditation content.

Duplicate bodies on alias routes **Medium**

~25 keyword-alias URLs render the same component as their canonical page.

Recommendation: Differentiate content or canonicalize.

2.3 On-Page SEO

Score: **55/100**

What Works

- Distinct per-path titles/descriptions defined in meta backend
- Descriptive URLs; single H1 per page

Findings

Titles/descriptions absent from static HTML **High**

Every URL's raw HTML carries the homepage title and description; only JS updates them.

Recommendation: Emit per-page title/description in server HTML.

Canonical only on homepage **High**

41 of 42 pages have no canonical; alias/duplicate routes cannot consolidate.

Recommendation: Add canonical to every page.

Keyword-stuffed meta keywords on every page **Medium**

Full GLOBAL_KEYWORDS list injected site-wide via useMeta.

Recommendation: Remove or drastically slim the keywords meta.

2.4 Schema / Structured Data

Score: **55/100**

What Works

- Rich valid JSON-LD @graph: Organization, WebSite+SearchAction, Place, EducationalOrganization, Service, Course, BreadcrumbList (4 blocks, all valid, 14KB)

Findings

Homepage graph served on every route **High**

/about, /services/*, /blogs all carry the Organization + CPL breadcrumb + Course schema, which is wrong for those pages.

Recommendation: Emit page-appropriate schema per route; keep Organization/WebSite site-wide.

Keyword-stuffed schema name fields **Medium**

Organization name is a full keyword phrase rather than the brand name.

Recommendation: Use real brand name; move keywords to description.

Missing per-page schema opportunities **Medium**

No Course on course pages, Service on service pages, FAQPage, or BlogPosting on articles.

Recommendation: Add page-type schema.

2.5 Performance (CWV)

Score: **60/100**

What Works

- LCP hero preloaded with responsive srcset (all 200)
- preconnect + non-blocking fonts, route-level lazy loading, modulepreload, WebP, Brotli

Findings

Live CWV unavailable **Medium**

PSI API rate-limited (429) during audit.

Recommendation: Re-measure with CrUX/PSI key.

JS-first render cost **Medium**

Full hydration before content paints; multiple vendor chunks + a 3s popup timer add main-thread work.

Recommendation: Reduce JS, monitor mobile TBT/INP.

2.6 AI Search Readiness

Score: **40/100**

What Works

- Strong Organization/EducationalOrganization schema and consistent NAP aid entity understanding once rendered

Findings

Content invisible to non-rendering AI crawlers **High**

GPTBot/PerplexityBot/AI Overviews see an empty shell; low citability.

Recommendation: Server-render content and add passage-level answer blocks.

No llms.txt and no static FAQ/answer blocks **Medium**

No quotable Q&A passages in HTML.

Recommendation: Add FAQ content + optional llms.txt.

2.7 Images

Score: **70/100**

What Works

- WebP hero/location/logo assets
- alt text present on images (multiline JSX)
- responsive hero srcset; favicon and apple-touch-icon resolve

Findings

Missing explicit width/height on content images **Medium**

CLS risk without dimensions/aspect-ratio.

Recommendation: Set width/height or aspect-ratio.

Some aircraft images still JPEG **Low**

public/*.jpeg not converted.

Recommendation: Convert to WebP/AVIF.

3. Action Plan

Phase 1: Critical Fixes Week 1

- Return real HTTP 404 for unknown routes
- Prerender/SSR the 43 sitemap URLs
- Add Sitemap: directive to robots.txt

Phase 2: High-Impact Improvements Weeks 2-3

- Add canonical to all 41 remaining pages
- Add Open Graph + Twitter tags (default + per-page)
- Emit per-page schema instead of homepage graph everywhere
- Remove duplicate title system / Render.com meta dependency
- Fix keyword-stuffed schema name fields

Phase 3: Content & Authority Month 2

- Differentiate or canonicalize alias routes
- Add E-E-A-T signals (bios, DGCA approvals, accreditations)
- Add FAQ blocks + FAQPage schema
- Remove keyword-stuffed meta keywords
- Add lastmod to sitemap

Phase 4: Monitoring & Iteration Ongoing

- Measure real CWV via CrUX/PSI
- Add security headers
- Convert remaining JPEGs to WebP + set dimensions
- Submit sitemap in GSC and monitor coverage
- Optional llms.txt

Data Sources & Methodology

Source	Description	Update Frequency
PageSpeed Insights API	Lighthouse lab audit (mobile emulation, Moto G Power, slow 4G)	Real-time
Chrome UX Report (CrUX)	28-day rolling field data from real Chrome users	Daily ~04:00 UTC
CrUX History API	25-week p75 trend data per metric	Weekly
Google Search Console	Search Analytics (clicks, impressions, CTR, position)	2-3 day lag
URL Inspection API	Per-URL index status, coverage state, crawl info	Real-time (2,000/day)

Report generated by Claude SEO — Google SEO Intelligence Skill — July 30, 2026
Methodology based on Google Web Vitals thresholds, Search Console documentation, and Lighthouse scoring algorithms.
